

WeMos D1 ESP8266 WiFi Board

The WeMos D1 is a ESP8266 WiFi based board that uses the Arduino layout with operating voltage of 3.3V. Note that this is NOT an Arduino board, it only uses the Arduino Uno layout for the board design! In summary, the board is controlled by the ESP8266 chip (a 32-Bit processor) and has a larger flash memory compared to an Arduino Uno. It consists of 11 digital I/O pins and 1 analogue (input) pin. The board can be connected using a Micro-B type USB cable. (Aka “Android Cable”).

SKU: [MDU1112](#)

Brief Data:

- Microcontroller: ESP-8266EX.
- Operating Voltage: 3.3Vdc.
- Digital I/O Pins: 11.
- Analog Input Pins: 1.
- Clock Speed: 80MHz/160MHz.
- Flash: 4M bytes.
- Board Dimension: 68.6mm x 53.4mm.
- Weight: 25g.

Mechanical Dimension:

Unit: mm

The Face behind our product quality...

In a world of constant change and continuous technological development, a new or replacement product is never far away – and they all need to be tested.

Many vendors simply import and sell without checks and this cannot be the ultimate interests of anyone, particularly the customer. Every part sold on Handsontec is fully tested. So when buying from Handsontec products range, you can be confident you're getting outstanding quality and value.

We keep adding the new parts so that you can get rolling on your next project.
